

Applymark 610

a world first in applicator technology

At last, a PCB applicator that can accurately and consistently print at 600dpi and apply the smallest of PCB labels is available.

The first of its kind within the electronics industry anywhere in the world, the highly compact Apply-mark 610 is based around the industry standard Zebra 90xiIII/96xiIII printer, making it simple to integrate into Zebra systems already in use for other labelling requirements.

- print resolution up to 600 dpi, not available from any other print and apply system worldwide.
- conversion of your existing Zebra 90XiIII/96xiIII 600dpi printers to include full label print and apply capability.
- accuracy and consistency of label placement unparalleled in the industry.
- shortest changeover and set up times.
- cycle times of less than three seconds.
- compact units to fit existing production lines.
- reel end alert options.
- plc connectivity.

Information on multi-axis solutions is available on request.
